

SERVICE PATHWAY

ADVISE AND TRANSFORM THE ORGANIZATION

Partner-Level Consulting & Transformation Advisory

Senior advisory judgment combined with owner-side implementation discipline for complex financial, commercial, governance and organizational challenges.

The value I provide

I work alongside government leaders, executives, business owners and consulting teams to turn complex or fragmented challenges into practical, governed and sustainable programmes of action. My contribution spans diagnosis, options and business cases, governance design, stakeholder alignment, Technical PMO oversight, implementation assurance and capability transfer.

Who I support

Government & public entities

Finance, governance, assets, data and institutional transformation.

Infrastructure & major projects

Financial governance, commercial insight and transformation delivery.

SMEs & family businesses

Scalable governance, working capital, controls and performance.

Boards, executives & owners

Independent advice on high-stakes cross-functional decisions.

Consulting firms & programme teams

Partner-level specialist support, assurance and owner-side perspective.

Finance & transformation offices

Programme structure, recovery, evidence and implementation discipline.

Challenges I help address

- The problem crosses finance, operations, projects, assets, technology, data and people, with no single owner.
- Recommendations exist, but accountability, sequencing, dependencies and implementation are unclear.
- A major transformation or programme needs stronger sponsor support, governance, assurance or recovery.
- Management needs an independent, evidence-based assessment of risks, options and financial or commercial implications.
- Systems, policies, data and operating practices are not aligned, limiting adoption and expected value.
- The organization needs to build internal ownership and capability rather than remain dependent on advisors.

How I can help

Executive diagnosis & transformation

Evidence review, options, operating model, roadmap and recommendations.

Technical PMO leadership

Programme structure, dependencies, assurance, recovery and executive reporting.

ERP, data & decision support

Requirements, implementation governance, dashboards, analytics and adoption.

Governance & controls

Decision rights, delegations, accountability, internal control and compliance.

Mega projects & commercial

CapEx governance, value-for-money, cost visibility and change control.

SME & family business

Restructuring, working capital, growth controls and scalable finance practices.

Expected value and outcomes

- A clear definition of the real problem, supported by evidence and shared by decision-makers.
- Practical recommendations linked to owners, priorities, dependencies, controls and implementation steps.
- Stronger governance and executive visibility over complex programmes and organizational risks.
- Integrated solutions connecting finance, operations, technology, data, assets and people.
- Reduced implementation risk, duplicated effort and dependence on fragmented advisory outputs.

- Internal capability and institutional ownership that continue after the engagement.

Relevant advisory credibility

More than 35 years combining Big Four audit and advisory foundations with senior in-house finance and transformation leadership across government, infrastructure, ports, marine operations, real estate and commercial environments. Experience includes owner representation, Technical PMO leadership, finance-function build and restructuring, ERP programmes, governance frameworks, asset and costing transformation, analytics and executive decision support.

Ways to engage

Independent executive review • Partner or specialist advisory support • Owner representative • Technical PMO or programme advisor • Transformation diagnostic and roadmap • Governance/commercial review • Fractional executive advisory

Discuss Your Advisory or Transformation Requirements

Start with an alignment conversation to define the decision, evidence, stakeholders, expected outcomes and the right engagement model.
